

FREYSSINET AQUAGARDE

FREYSSINET
SUSTAINABLE TECHNOLOGY

- Effective drainage solution
- Makes leaking joints watertight
- Easy installation
- Bespoke

FREYSSICARE SOLUTIONS

Aim

To drain, divert and collect water away from sensitive areas of a structure.

Description

Freysinet Aquagarde is an effective drainage system which collects run-off water and diverts it away from components of the structure which may be susceptible to corrosion.

Benefits

- Diverts water from corrosion-prone areas
- Improves whole life of components
- Makes leaking joints watertight
- Can be deployed as a rapid solution to existing problems
- Easily removable to help maintain
- Durable
- Custom-made from translucent material, allowing for easy inspection
- Economic installation

PROTECTION – PREVENTION - ENHANCEMENT

Freysiccare accessories are designed to enhance and extend the life of bridge components, such as bearings and expansion joints. The Freysiccare collection offers effective protection to such components by shielding or diverting rainwater and airborne contaminants, the main cause of corrosion.

FREYSSINET AQUAGARDE

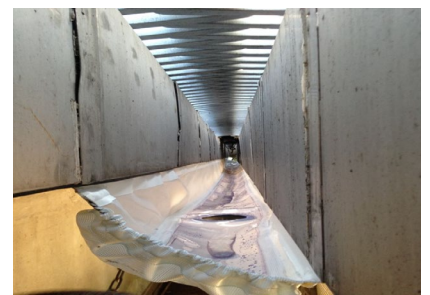

The **Freysinet Aquagarde** is a unique water drainage system for collecting and diverting rainwater away from areas of a structure that are not easy to seal, such as below an expansion joint.

The Aquagarde is custom-designed and made to suit all types and sizes of expansion joint. Installation is straightforward and the attachment mechanisms are secure and weather resistant. They are also easy to remove when required for inspections or replacement.
