

Environmental Policy Statement

At Freyssinet Limited and Aquaforce Concrete Services, in accordance with the Group ethos of "Sustainable Technology", we take a proactive and responsible approach in managing the environmental impact of all of our activities.

This policy outlines our commitment to operating in an environmentally sensitive manner and reinforces the goal of providing sustainable technology whilst maintaining continual improvement in environmental performance.

We strive to raise awareness of key environmental issues among employees, customers, and suppliers. We will consult with them and encourage them to be responsive, flexible and forward planning to adapt to evolving environmental conditions.

We will prevent pollution of the environment as a result of our own and our subcontractors' activities and protect natural resources, biodiversity, and ecosystems wherever possible. In addition, we actively promote construction and repair techniques that use sustainable technologies and reduce environmental impacts and ensure that the environmental impact of plant and equipment throughout their lifecycle is reduced as far as reasonably practicable.

Freyssinet operates an Environmental Management System, which is designed to comply with ISO 14001:2015. This system enables us to monitor environmental performance, identify non-conformances, and implement corrective actions where these may be required. We utilise this system to implement continual improvement throughout the scope of our operations. Aquaforce Concrete Services operates under the same system.

We will comply with relevant environmental legislation, guidance, best practices, and other applicable requirements. We aim to lead by example and will promote good environmental practices and embedding the principles of sustainability and energy efficiency throughout our business.

Environmental objectives and targets will be set, aligned with significant environmental aspects, and reviewed annually to ensure continual improvement. The board has overall responsibility for reviewing the company's environmental activities and performance.

Management shall ensure that this policy is communicated to and understood by all employees and interested parties. It is maintained at all levels of the organisation and reviewed regularly to ensure ongoing relevance and effectiveness.
