

Carbon Management Policy Statement

At Freyssinet Limited, we are unwavering in our commitment to reducing carbon emissions across all operations, reflecting our Group ethos of "Sustainable Technology" and our responsibility to the environment. Recognising the urgency of the climate crisis, we strive to lead the construction sector in sustainable practices, embedding innovation and accountability at every level of our business.

Strategic Alignment and Standards Our carbon management system adheres to PAS 2080:2023 Carbon Management in Buildings and Infrastructure, ensuring rigorous monitoring, measurement, and reduction of emissions. Additionally, we align with key frameworks, including:

- **National Highways' Environmental Sustainability Strategy**
- **National Highways' net zero 2030 / 2040 / 2050 plan**

These standards guide our actions and ensure compliance with the latest industry expectations, reinforcing our role as a forward-thinking contractor.

Targets and Accountability Freyssinet is striving to introduce science-based targets by 2028.

Our specific targets include:

- **Scope 1 & 2 emissions:** Reduce by 50% by 2030 (baseline: 2021)
- **Scope 3 emissions:** Reduce by 20% by 2030 (baseline: 2022)

These targets also align with the VINCI Group's ambitious global sustainability goals.

These objectives are reviewed annually, with new reduction strategies developed as needed. Our Senior Leadership Team holds ultimate responsibility for driving these initiatives and ensuring compliance with all relevant policies.

Engagement and Collaboration We proactively assess our operations to identify key sources of greenhouse gas emissions and engage with employees, customers, and suppliers to raise awareness of the climate emergency. Collaboration is at the heart of our approach:

- **Clients:** Exceeding their carbon emission targets through innovative project solutions.
- **Suppliers and subcontractors:** Partnering to reduce emissions across the supply chain.

Innovation in Action Freyssinet leverages on innovation and digital tools, such as the National Highways' Carbon Tool, to quantify, track, and reduce emissions across projects. We prioritise:

- Incorporating low-carbon materials and designs.
- Exploring renewable energy solutions.
- Enhancing operational efficiencies throughout the project lifecycle.

Commitment to Leadership Through continuous alignment with VINCI Group's sustainability framework, National Highways' Environmental Sustainability Strategy, and the PAS 2080 standard, Freyssinet demonstrates a steadfast commitment to advancing sustainable construction practices. Together, we contribute to the UK's net-zero ambitions, setting a benchmark for the construction industry.

This Policy Statement, along with our Carbon Management System Manual, is communicated to all employees and made available to interested parties to ensure transparency and shared responsibility.
